July 6, 2011

Dear Mark Persico,

Please include the following items in scope of the EIR study for the DWP property on the corner of 1st and Marina.

(1) Sediments in the San Gabriel River within the DWP property must be in accordance with California state sediment analysis: the sediment quality

objectives must be characterized.

(2) sample the entire land portion for contaminents, not just the power plant site

(3) analysis of the methodology of the asbestos testing done in the 1980s.

(4) obtain original power plant designs from the DWP and city of Los Angeles to determine where contamination could currently exist and test accordingly.

Thank you.

Sincerely,

Mike Buhle
