Annual Summer Send Off in Heather Park

Last month the Community Services Department hosted a fitting farewell to the summer season with the Annual Summer Send Off in Heather Park. Approximately 300 people attended the event which included crafts, games, and a showing of Pixar’s *Coco*. Food and beverages were provided by the College Park East Neighborhood Association.
Water Source Backup

In anticipation for a planned water source shutdown, the Water Department rented a back up power generator to provide energy for any main power source interruption during a scheduled Metropolitan Water shutdown. In the summer months, drinking water is purchased from the Metropolitan Water District to alleviate water well overuse. In preparation for any impacts on the water system, crews are working to provide a secondary source to the Navy Reservoir which provides supply and storage to meet system pressure needs.

Radiator Repair in Old Town

During routine backup engine maintenance, the Sewer Department discovered a radiator in need of repair. Station 35 serves Old Town residents with sewer services and has three motors, two of which are equipped with secondary backup power. During maintenance, it was found that cores of the radiator and fins were deteriorating and in need of attention. Work was fast-tracked in the event of a possible power outage in the Old Town area. During a power outage, this station will have an operator present to ensure reliability of the station, and fast response for any potential situation. These engines are tested weekly and have scheduled service intervals.

Meter and Pipeline Repairs

The Water Department has been busy repairing leaks from small meters to the larger pipeline. Last month, a leak was noticed on Ocean Ave., and crews were dispatched to make necessary repairs. Upon excavation, a small section of pipe was found in need of repair resulting in replacement of the section. Valves were used to isolate the section of pipe and a full shutdown took place without any residences losing water. Full repairs to the street were subsequently scheduled to allow the subgrade surface to fully dry before asphalt pavement is restored.

Girls Adventure Club

The Girls Adventure Club of Long Beach came to visit Seal Beach and was not disappointed! Seal Beach lifeguard Makenna Oberst gave the group a tour and provided safety tips before the girls spent the day at the beach.
