New Solar Lights in College Park West

Our Maintenance crew recently teamed up with our on-call electrical contractor on a bright new upgrade for College Park West: a self-contained solar-panel and battery system that now powers both the monument sign and its matching tree up-lighting.

The off-grid solar panel and battery now powering College Park West's sign and tree up-lighting trims energy costs, cuts carbon, and keeps the area lit from dusk to dawn—even during outages—without any trenching or wiring. Low-maintenance LEDs with dusk sensors mean longer bulb life and fewer service calls.

This improvement was made possible through the generous support of Councilmember Ben Wong's discretionary funds.
