Replaced Water Service on Electric Avenue: Old Meter Out, New Service In

While upgrading an antiquated three-digit water meter on Electric Avenue, our Utilities crew discovered that the service line feeding it was badly corroded. Instead of a simple meter swap, they installed a brand-new 1-inch service line and connected it to a modern $\frac{3}{4}$ -inch meter. The improvement delivers more accurate readings, strengthens the system against future leaks, and helps prevent unexpected downtime. It's another behind-the-scenes upgrade that keeps Seal Beach's water flowing smoothly.
